PROJECTS

Twin Bridges Lake — *Small Business Website*

I designed and built this application. Special features include Google Maps, Google Analytics, and Flickr API integration.

Tools: **React - Bootstrap - Node.js**

ADP Monitoring System — *Customizable System Monitoring*

I built the REST API and performed as the sole front end developer on this project.

Tools: **React - Node.js - Express - MongoDB - Socket.io - RabbitMQ - Webpack**

Culturalink — *Full Business Solution*

I performed as the sole front end developer on this project and contributed largely to the creation of the API. Special features include Video Chat.

Tools: **React - TypeScript - Jest - Node.js - Express - Sequelize - HighCharts - Videyo - Socket.io - Webpack**

MailChimp Annual Newsletter — *Award Winning Design*

Given only a two week timeframe, a partner developer and I delivered this award winning year-end newsletter to mailChimp in the nick of time.

Tools: **JavaScript - Ruby on Rails - Lazy Loader - CSS**

EXPERIENCE

Freelance, Atlanta — *Web Developer*

July 2017 - PRESENT

Creating full stack applications and websites for small businesses.

- **Design responsive layouts**
- **Build APIs and User Interfaces**
- **Deploy and maintain completed applications**

SOLTECH, Atlanta — *Front End Engineer*

Oct 2016 - July 2017

Creating solutions for clients through clean, testable, scalable and maintainable code with responsive UIs.

- **Performed as the sole Front End Developer on multiple projects.**
- **Influence design decisions.**

SKILLS

Language

JavaScript - TypeScript

Front End

React - Angular - jQuery

Backend

Node.js - Express - Sequelize

Database

SQL - MySql - Postgres - MongoDB

Markup

HTML/CSS - SASS - Bootstrap

Tools

**Redux - Mobx - Socket.io
HighCharts - Plotly.js - Axios - AJAX**

Workflow

Webpack - Git - Gulp

Deploy

Heroku - AWS - Google Cloud

Environments

Freelance - Agile - SCRUM - Waterfall

AWARDS

Most Loved Website

for MailChimp Annual Newsletter

All-Star Customer Service

during my time at home depot

- **Git for version control, Slack for inner communication**

EDUCATION

The Iron Yard, Atlanta — *Front End Engineering*

2016

A fifteen week bootcamp designed to provides its students with the skills they need to perform as front end developers. Taking advice from the leading software firms in Atlanta, this school teaches what is in demand. During my time there not only did I learn Angular, but I gained an understanding of JavaScript that has allowed me to succeed using all the tools I've met so far; React, Node.js, Express... even other languages, such as C# or Ruby, are entirely approachable thanks to The Iron Yard.

CUNY Hunter, NYC — *All Things Considered*

2005 - 2008

I studied Chemistry, History, Physics, Religion, Logic, Math... I enjoyed all of it but couldn't imagine picking only one. Instead of forcing myself to make a half-hearted decision picking a major, I decided to travel for a bit. Somewhere along the way I made an acquaintance that introduced me to JavaScript and The Iron Yard and I knew I'd found 'my thing'.

Old Peachtree — *Montessori Beginnings*

Until 6th Grade

The Montessori method is one that allows its students creative choice in their learning process. Provided with hands-on learning materials in a collaborative but self-directed atmosphere, montessori students gain communication skills, critical thinking, confidence, and an active imagination from the beginning. All of which are fundamental building blocks for a good developer.
